One Apps Project

Lead Backend Engineer of OneApps (Nov 2020 - Mar 2021)

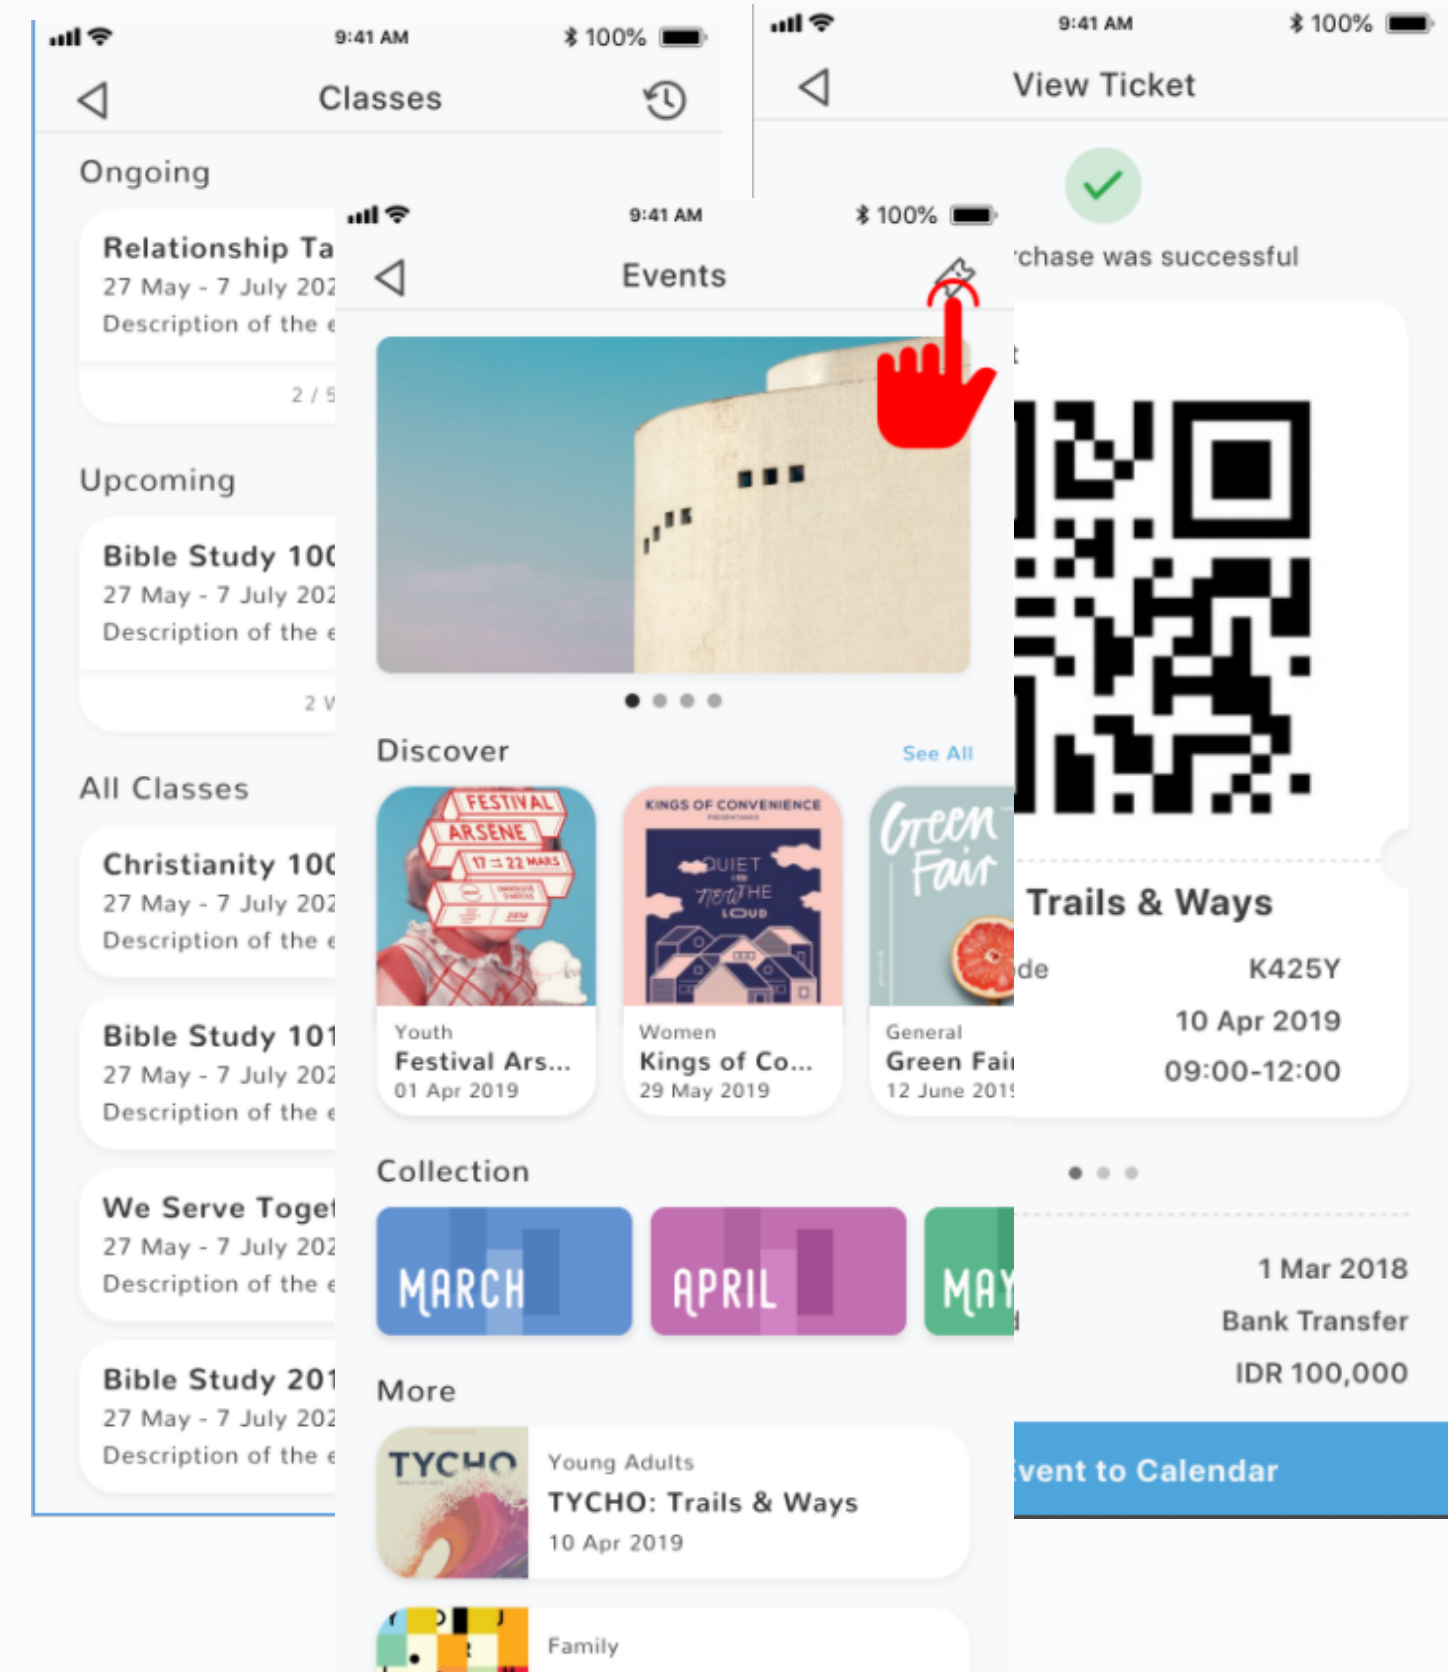

One Apps is an educational application that features news, events, bootcamp it and several leader board features, mobile-based user referrals made by IDSTAR. The backend technology used is laravel and uses several external APIs, email api and firebase.

SKYPORTER

Backend Developer of skyporter (Oct 2020 - Nov 2020)

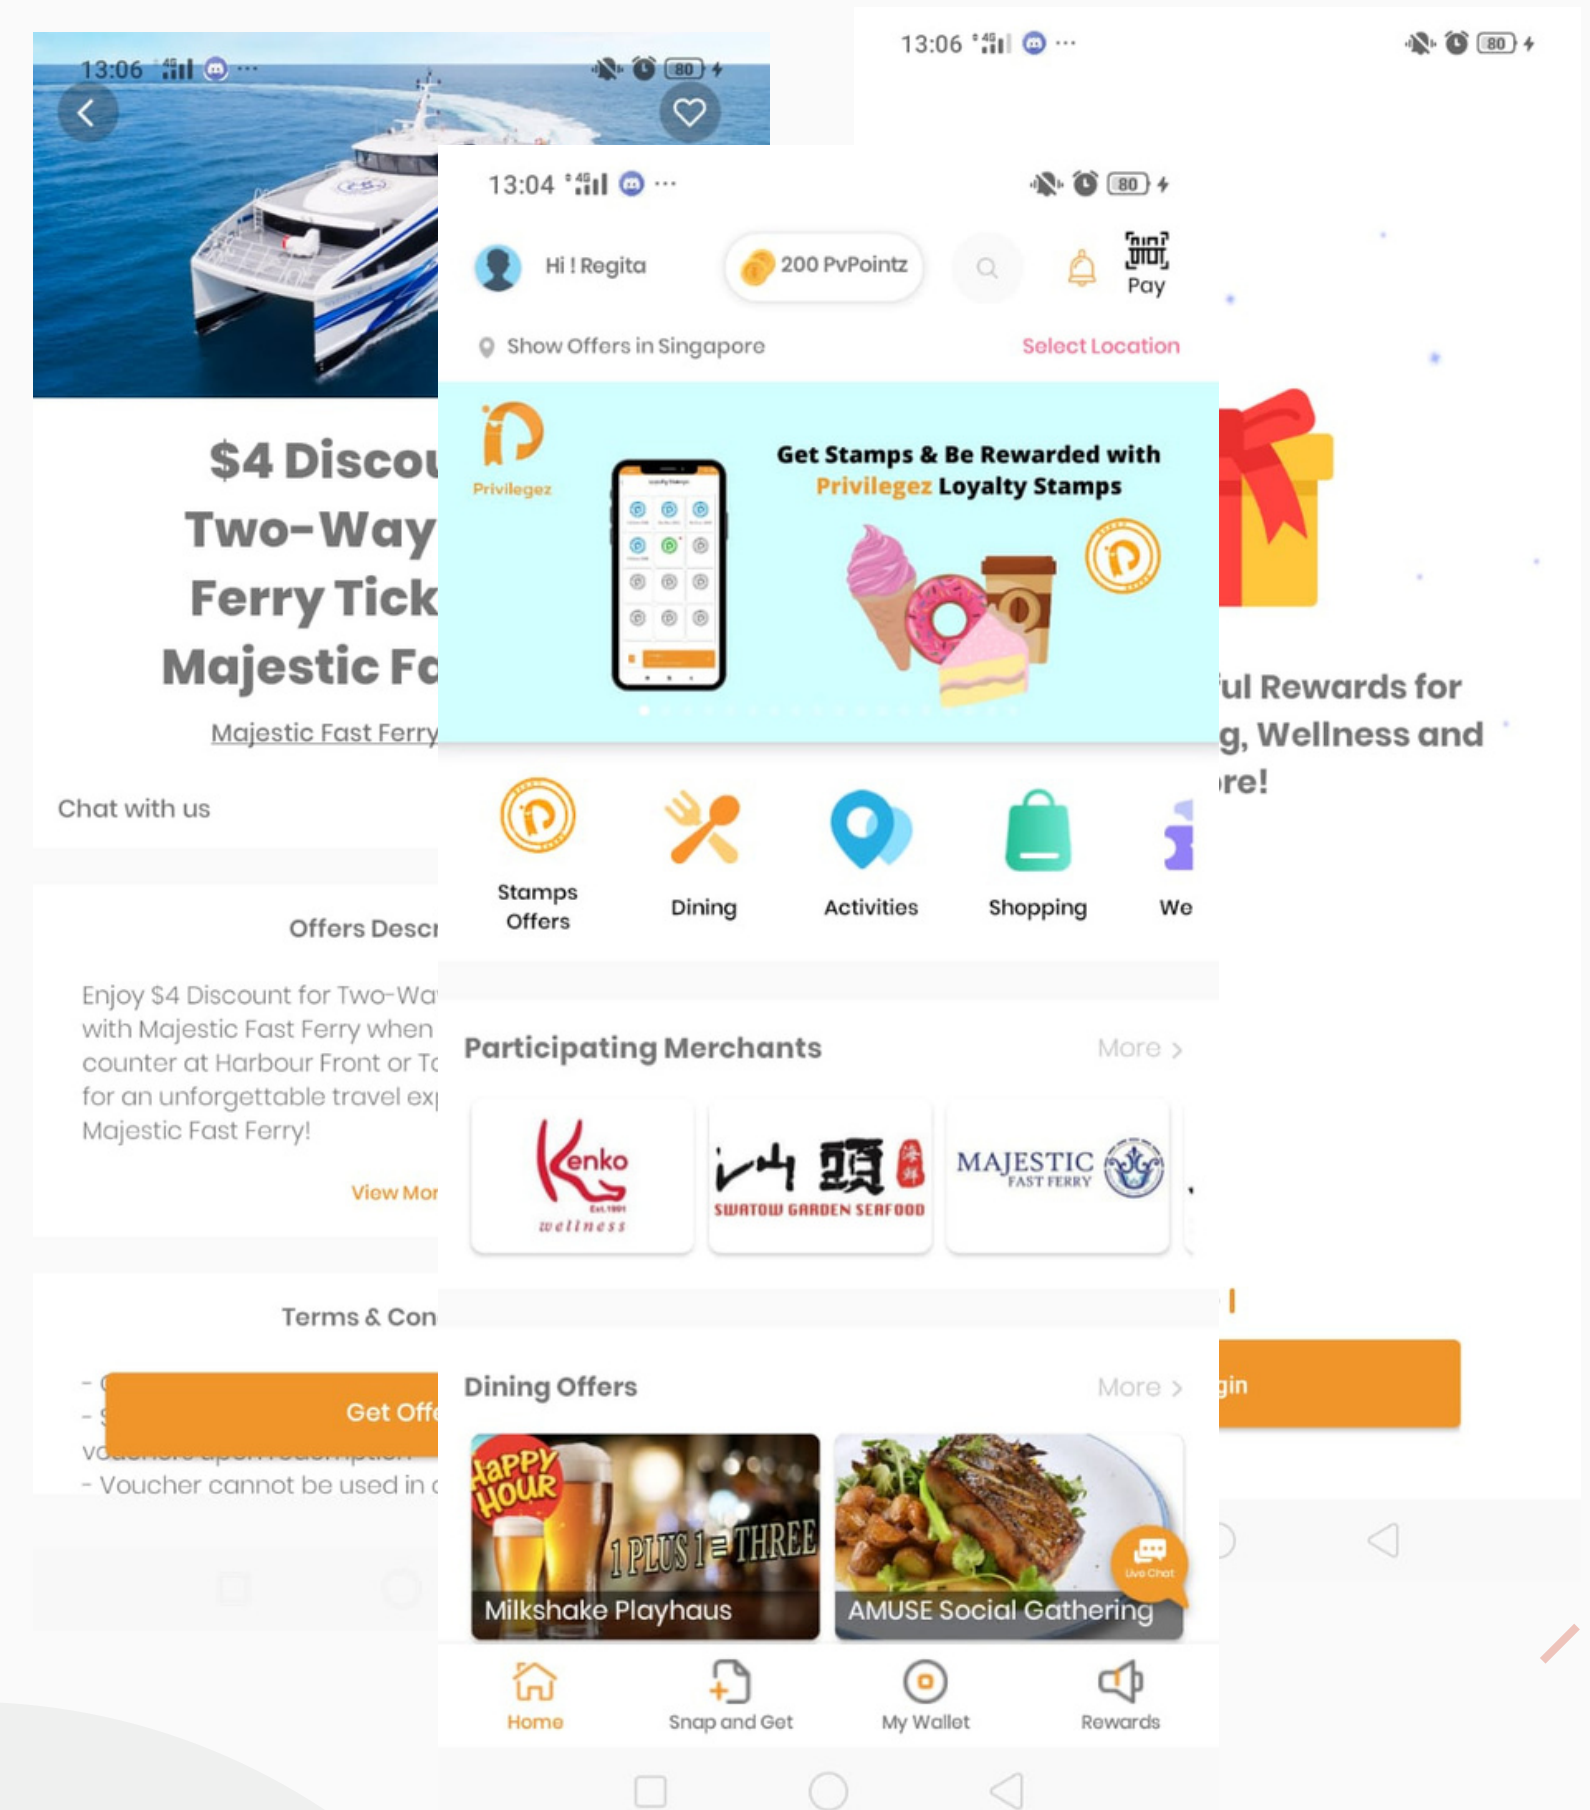

Skyporter is platform digital that created for church management and having various feature such as event, classes, campaign, check-in event, and many more. My responsibilities in this project are developing event and classes module using Laravel with repositories design pattern. I'm also developing api such as firebase notification and email for campaign, excel maat exporting for reporting features and QR generators for event ticketing and checkin.

PRIVILEGEZ

Lead Backend Engineer of Privilegez (Nov 2018 - Mar 2020)

Privilegez is a loyalty application base in Singapore that allows customers to collect stamps and points from merchants supported by products and vouchers. developed using a microservice architecture, and using a microframework, namely lumen. Privilegz is one of the most complex applications I've ever worked on. In addition to making rest api for client needs, I am also in charge of creating dashboards for admins, merchants and other roles involved in the application.

PANINTI SUPERAPPS

Backend Engineer of Paninti SuperApps v3(Nov 2018 - Mar 2020)

Paninti Superapps is a marketplace application that sells special needs for mothers and children. in it there are many features including e-commerce, special events for parents, parenting registry, pregnant and baby tracking development and many more. pananti superapps v3 is a running application that is still in development. Paninti superapps uses a microservices backend architecture and uses several languages in its development, namely nodejs, ruby on rails, and golang.

My responsibility in this project is to develop applications on the backend side, monitor progress, make a breakdown of tasks and timelines along with the backlog and rest api requirements that will be developed by the backend team. Besides that, I also often collaborate with product owners in developing application features. in this project I also do testing and validation along with stakeholders and do project documentation.
